

AccComp

$$l_{AA} = \text{DistCrit1} [\text{\AA}]$$

$$l_{DA} \text{ .or. } l_{AD} = \text{DistCrit2} [\text{\AA}]$$

$$\varphi_{DAA} \text{ .or. } \varphi_{AAD} = \text{AngleCrit} [^\circ]$$

„or“ case if AccDonSite-value = 0

$$l_{AA} \geq |r_{\text{AccAccSite}} - r_{\text{DonAccSite}}|$$

$$\varphi_{DAA} \leq \cos \frac{(r_{\text{AccDonSite}} - r_{\text{AccAccSite}}) \cdot l_{AA}}{|r_{\text{AccDonSite}} - r_{\text{AccAccSite}}| \cdot l_{AA}}$$

$$l_{DA} \geq |r_{\text{AccDonSite}} - r_{\text{DonAccSite}}|$$

$$l_{AD} \geq |r_{\text{AccAccSite}} - r_{\text{DonDonSite}}|$$

$$\varphi_{AAD} \leq \cos \frac{l_{AA} \cdot (r_{\text{DonAccSite}} - r_{\text{DonDonSite}})}{|l_{AA}| \cdot |r_{\text{DonAccSite}} - r_{\text{DonDonSite}}|}$$

Inputbeispiel fürs par-file:

AccComp	AccAccSite	AccDonSite	DonComp	DonAccSite	DonDonSite	DistCrit1	DistCrit2	AngleCrit
1	2	0	1	2	3	3.5	2.6	30
1	2	3	1	2	0	3.5	2.6	30
